## Introduction

This document is used for the evaluation kits (EVKs) of the MxL83437 and MxL83438 (MxL8343x) devices. These EVKs provide a platform to evaluate the features and performance of the MxL8343x.

## MxL83437 EVK Setup and Pre-Configuration

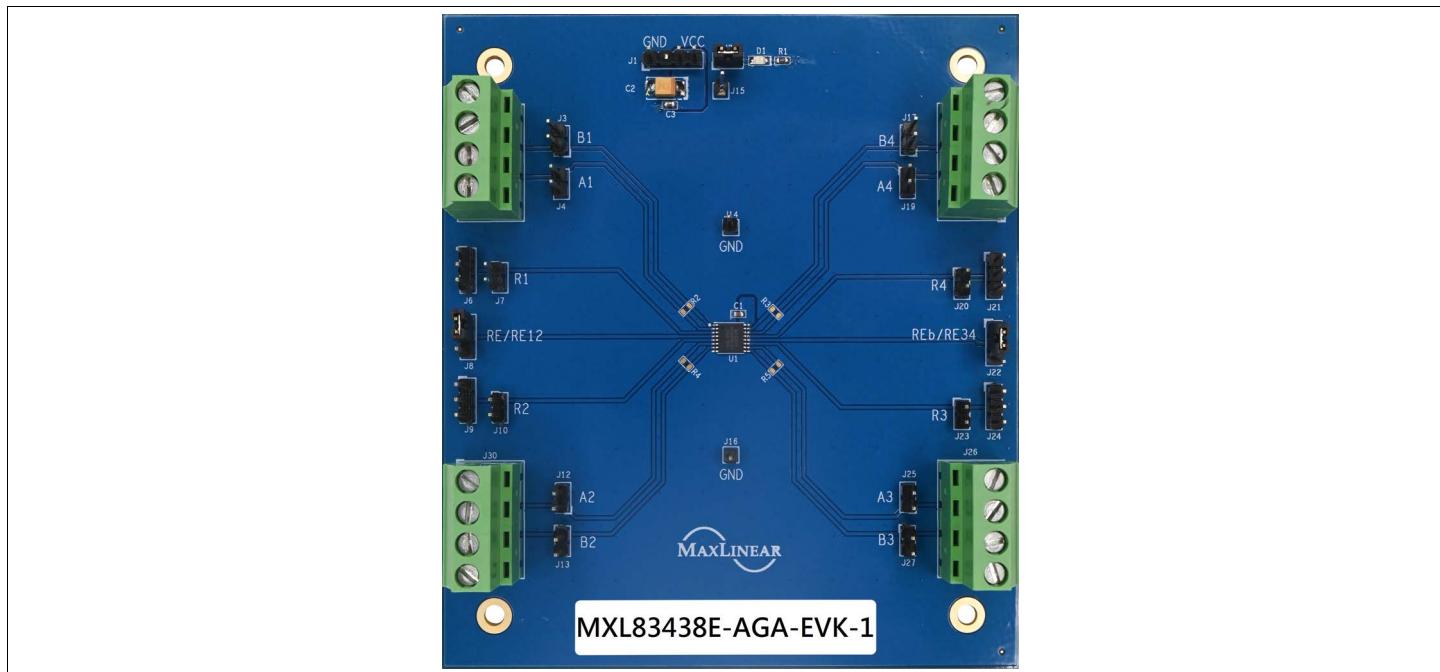

- The MxL83437 EVK is pre-configured for global enable with RE = V<sub>CC</sub> and REb = GND. All four receiver outputs are enabled simultaneously in this configuration.
- Apply V<sub>CC</sub> = 5.0V bench power supply to header J1 at pin 2 (J1.2) or pin 3 (J1.3).
- Apply GND connection to J1 at pin 1 (J1.1).
- J14 and J16 are GND probe points on the EVK.
- When the power V<sub>CC</sub> is applied at header J1, the LED at location D1 is ON.
- Screw terminal block J5, J30, J26, and J18 are inputs to receiver channel 1, channel 2, channel 3, and channel 4, respectively.
- Apply differential signals at J5, J30, J26, and J18. Monitor the receiver outputs at J7, J10, J23, and J20.
- [Figure 5](#) on page 4 shows the schematic of the EVK.

**Figure 1:** Top View of the MxL83437 (NSOIC16) EVK

## MxL83438 EVK Setup and Pre-Configuration

- The MxL83438 EVK is pre-configured for paired enable with  $R_{12} = V_{CC}$  and  $R_{34} = V_{CC}$ . All four receiver outputs are enabled simultaneously in this configuration.
- Apply  $V_{CC} = 5.0V$  bench power supply to header J1 at pin 2 (J1.2) or pin 3 (J1.3).
- Apply GND connection to J1 at pin 1 (J1.1).
- J14 and J16 are GND probe points on the EVK.
- When the power  $V_{CC}$  is applied at header J1, the LED at location D1 is ON.
- Screw terminal block J5, J30, J26, and J18 are inputs to receiver channel 1, channel 2, channel 3, and channel 4, respectively.
- Apply differential signals at J5, J30, J26, and J18. Monitor the receiver outputs at J7, J10, J23, and J20.
- [Figure 5](#) on page 4 shows the schematic of the EVK.

## EVK Setup and Configurations

The following table lists the header pin descriptions of the MxL8343x.

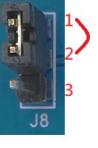

**Table 4: EVK Header Pin Description**

J1	J1-Pin 1	J1-Pin 2	J1-Pin 3	J1-Pin 4
<b>Name</b>  	GND	NC	V <sub>CC</sub> <sup>1</sup>	V <sub>CC</sub> <sup>1</sup>

1. V<sub>CC</sub> = 3.0V to 5.5V.

The following table lists the header pin factory settings and descriptions of the MxL8343x. For a complete view of the MxL83437 EVK, see [Figure 1](#) on page 1. For a complete view of the MxL83438 EVK, see [Figure 2](#) on page 2.

### MxL83437

The MxL83437 device offers a global enable configuration.

All four receiver outputs are enabled simultaneously when RE = V<sub>CC</sub> or REb = GND.

When RE = GND and REb = V<sub>CC</sub>, all four receiver outputs are in a high impedance state.

### MxL83438

The MxL83438 device offers a paired enable configuration.

The channel 1 and channel 2 receiver outputs are enabled simultaneously when RE12 = V<sub>CC</sub>.

The channel 3 and channel 4 receiver outputs are enabled simultaneously when RE34 = V<sub>CC</sub>.

When RE12 = GND, the channel 1 and channel 2 receiver outputs are in high impedance state.

When RE34 = GND, the channel 3 and channel 4 receiver outputs are in high impedance state.

## Layout Recommendations

The following are recommended layout practices that are already applied in the EVK:

- Application of bypass capacitors of at least 100nF as close as possible to the V<sub>CC</sub> terminal of the device.
- Note:** If the supply source is generated from a linear power supply or regulator, MaxLinear recommends that you use additional 10µF (C2) and 100nF (C3) ceramic capacitors.
- Use of at least two vias for the V<sub>CC</sub> and ground connections of the bypass capacitors to minimize effective via inductance.
  - When possible, use of a V<sub>CC</sub> and ground plane to provide low-inductance traces and signal path.

For more information and tips on layout, refer to the *RS-232 and RS-485 PCB Layout Application Note* (293AN).
