### \* Description

This is a color active matrix TFT (Thin Film Transistor) LCD (liquid crystal display) that uses amorphous silicon TFT as a switching device. This model is composed of a Transmissive type TFT-LCD Panel, driver circuit, back-light unit. The resolution of a 2.8''TFT-LCD contains 240x320 pixels, and can display up to 65K/262K colors.

### \* Features

- Low Input Voltage: 3.3V(TYP)
- Display Colors of TFT LCD: 65K/262K colors
- TFT Interface: 8/9/16/18Bit MCU Interface
  - 3/4SPI+16/18Bit RGB Interface
  - 3-line/4-line Serial Interface

| General Information Items | Specification                | Unit    | Note |
|---------------------------|------------------------------|---------|------|
|                           | Main Panel                   |         |      |
| Display area(AA)          | 43.20(H)*57.60 (V) (2.8inch) | mm      | -    |
| Driver element            | TFT active matrix            | -       | -    |
| Display colors            | 65K/262k                     | colors  | -    |
| Number of pixels          | 240(RGB)*320                 | dots    | -    |
| TFT Pixel arrangement     | RGB vertical stripe          | -       | -    |
| Pixel pitch               | 0.180(H)*0.180(V)            | mm      | -    |
| Viewing angle             | ALL                          | o'clock | -    |
| TFT Controller IC         | ST7789V                      | -       | -    |
| Display mode              | Transmissive/ Normally black | -       | -    |
| Operating temperature     | -20~+70                      | °C      | -    |
| Storage temperature       | -30~+80                      | °C      | -    |

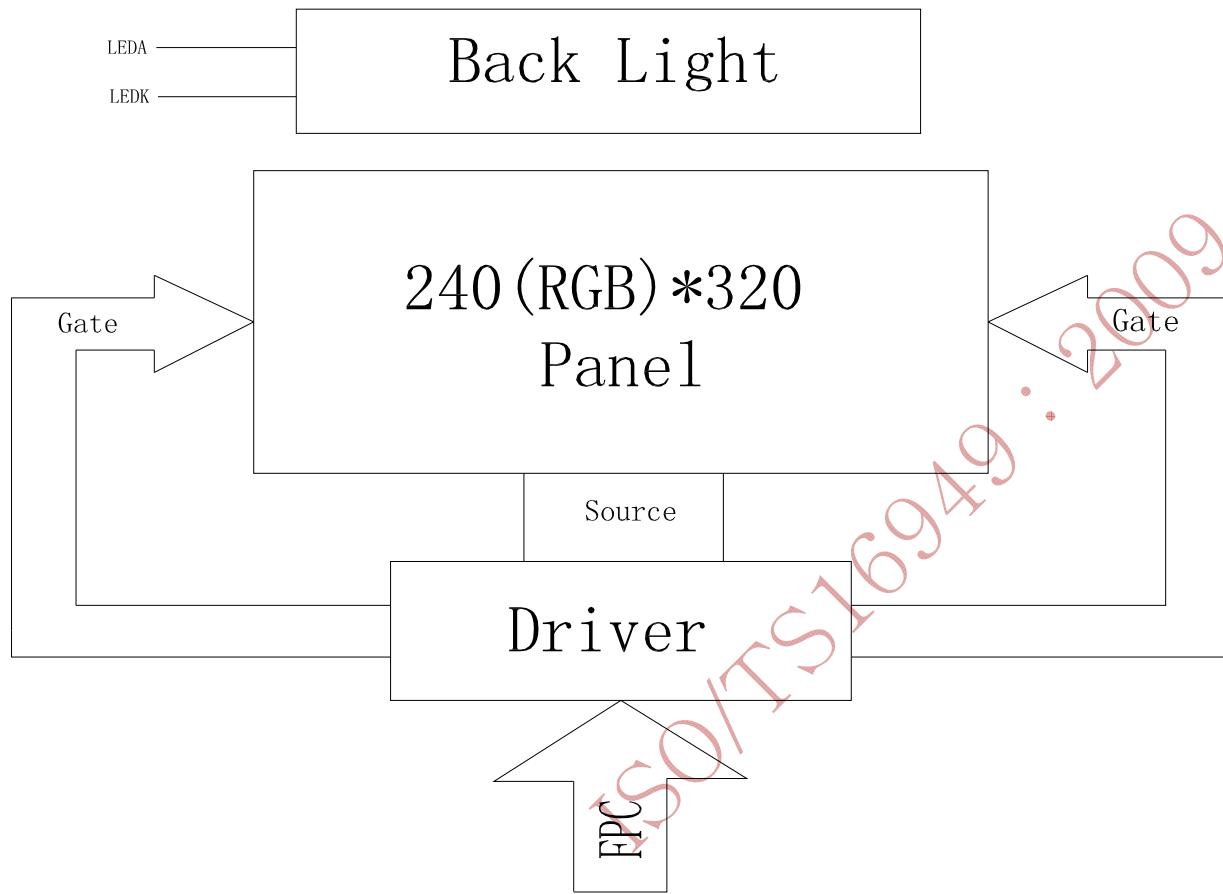

### \* Mechanical Information

| Item        | Min.          | Typ. | Max.  | Unit | Note |

## 3. Input terminal Pin Assignment

| NO. | SYMBOL      | DISCRIPTION   | I/O |
|-----|-------------|---|-----|
| 1   | GND         | Ground.   | P   |
| 2   | XR(NC)      | Touch panel Right Glass Terminal  | A/D |
| 3   | YD(NC)      | Touch panel Bottom Film Terminal  | A/D |
| 4   | XL(NC)      | Touch panel LIFT Glass Terminal   | A/D |
| 5   | YU(NC)      | Touch panel Top Film Terminal   | A/D |
| 6   | IOVCC       | Supply voltage for IO (1.8-3.3V).   | P   |
| 7   | IOVCC       | Supply voltage for IO (1.8-3.3V).   | P   |
| 8   | VCI         | Supply voltage (3.3V).  | P   |
| 9   | VCI         | Supply voltage (3.3V).  | P   |
| 10  | IM2         | MPU Parallel interface bus and serial interface<br>select If use RGB Interface must select serial interface.<br>Fix this pin at IOVCC and GND.  | I   |
| 11  | IM1         |   |     |
| 12  | IM0         |   |     |
| 13  | RESET       | This signal will reset the device and must be applied to properly initialize the chip.  | I   |
| 14  | CS          | Chip select input pin ("Low" enable).<br>Fix this pin at IOVCC or GND when not in use.  | I   |
| 15  | RS(SPI-SCL) | This pin is used to select "Data or Command" in the parallel interface. When D/CX = '1', data is selected. When D/CX = '0', command is selected. This pin is used serial interface clock in 3-wire 9-bit / 4-wire 8-bit serial data interface.<br>Fix this pin at IOVCC or GND when not in use. | I   |
| 16  | WR(SPI-RS)  | The data is applied on the rising edge of the SCL signal.<br>Fix this pin at IOVCC or GND when not in use.  | I   |
| 17  | RD          | Serves as a read signal and MCU read data at the rising edge.<br>Fix this pin at IOVCC or GND when not in use   | I   |
| 18  | VSYNC       | Frame synchronizing signal for RGB interface operation.<br>Fix this pin at IOVCC or GND when not in use.  | I   |
| 19  | H SYNC      | Line synchronizing signal for RGB interface operation.<br>Fix this pin at IOVCC or GND when not in use.   | I   |

## 4.3 Measuring Equipment

- FPM520 of Westar Display technologies, INC., which utilized SR-3 for Chromaticity and BM-5A for other optical characteristics.

Note (1) Definition of Viewing Angle:

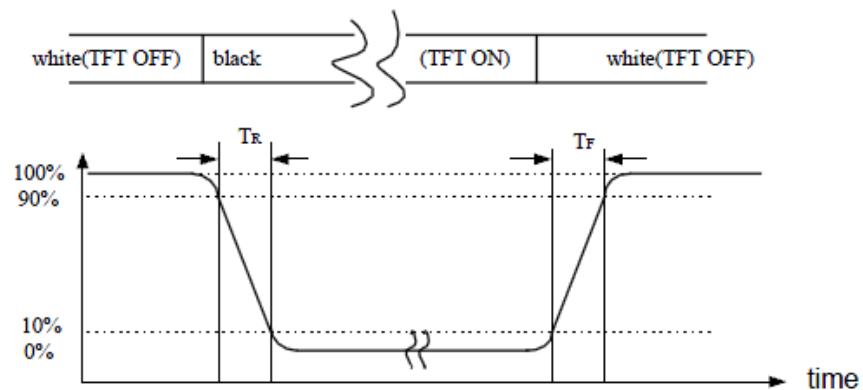

Note (2) Definition of Contrast Ratio (CR) :

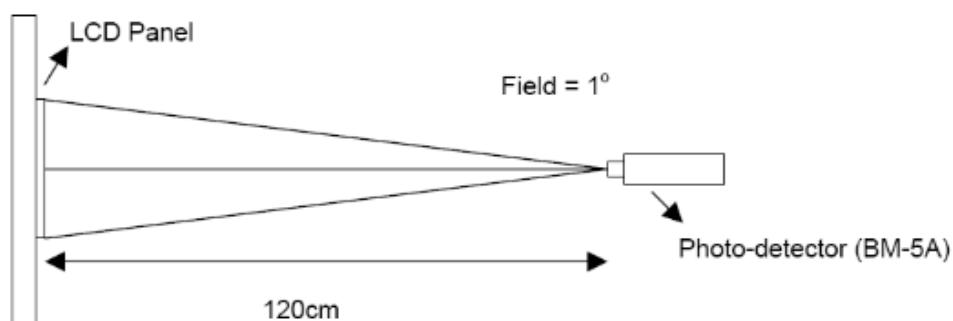

measured at the center point of panel

$$CR = \frac{\text{Luminance with all pixels white}}{\text{Luminance with all pixels black}}$$

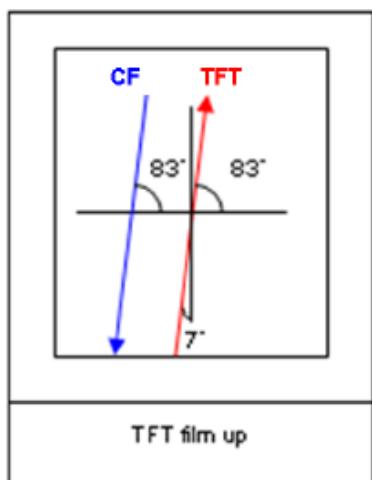

Note (3) Definition of Response Time : Sum of  $T_R$  and  $T_F$

## Note (4) Definition of optical measurement setup

Note (5) Rubbing Direction (The different Rubbing Direction will cause the different optima view direction.)

## 5. Electrical Characteristics

### 5.1 Absolute Maximum Rating (Ta=25 VSS=0V)

| Characteristics                  | Symbol            | Min. | Max. | Unit |
|----------------------------------|-------------------|------|------|------|
| Digital Supply Voltage           | V <sub>CI</sub>   | -0.3 | 4.6  | V    |
| Digital interface supple Voltage | I <sub>OVCC</sub> | -0.3 | 4.6  | V    |
| Operating temperature            | T <sub>OP</sub>   | -20  | +70  | °C   |
| Storage temperature              | T <sub>ST</sub>   | -30  | +80  | °C   |

NOTE: If the absolute maximum rating of even is one of the above parameters is exceeded even momentarily, the quality of the product may be degraded. Absolute maximum ratings, therefore, specify the values exceeding which the product may be physically damaged. Be sure to use the product within the range of the absolute maximum ratings.

### 5.2 DC Electrical Characteristics

| Characteristics                  | Symbol            | Min.                 | Typ. | Max.                 | Unit | Note |
|----------------------------------|-------------------|----------------------|------|----------------------|------|------|
| Digital Supply Voltage           | V <sub>CI</sub>   | 2.4                  | 2.8  | 3.3                  | V    |      |
| Digital interface supple Voltage | I <sub>OVCC</sub> | 1.65                 | 1.8  | 3.3                  | V    |      |
| Normal mode Current consumption  | I <sub>DD</sub>   | --                   | 6.8  | --                   | mA   |      |
| Level input voltage              | V <sub>IH</sub>   | 0.7V <sub>DDIO</sub> |      | V <sub>DDIO</sub>    | V    |      |
|                                  | V <sub>IL</sub>   | GND                  |      | 0.3V <sub>DDIO</sub> | V    |      |
| Level output voltage             | V <sub>OH</sub>   | 0.8V <sub>DDIO</sub> |      | V <sub>DDIO</sub>    | V    |      |
|                                  | V <sub>OL</sub>   | GND                  |      | 0.2V <sub>DDIO</sub> | V    |      |

|                        |                          |                |                       |               |

### 5.3 LED Backlight Characteristics

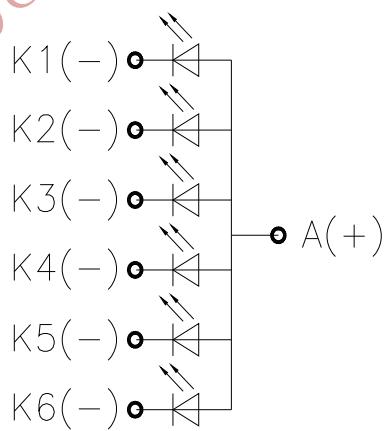

The back-light system is edge-lighting type with 6 chips White LED

| Item            | Symbol         | Min.  | Typ. | Max. | Unit              | Note    |
|-----------------|----------------|-------|------|------|-------------------|---------|
| Forward Current | I <sub>F</sub> | 90    | 120  | --   | mA                |         |
| Forward Voltage | V <sub>F</sub> | --    | 3.2  | --   | V                 |         |
| LCM Luminance   | L <sub>v</sub> | 510   | 560  | --   | cd/m <sup>2</sup> | Note3   |
| LED life time   | Hr             | 50000 | --   | --   | Hour              | Note1,2 |
| Uniformity      | AVg            | 80    | --   | --   | %                 | Note3   |

Note (1) LED life time (Hr) can be defined as the time in which it continues to operate under the condition:

T<sub>a</sub>=25±3 °C, typical IL value indicated in the above table until the brightness becomes less than 50%.

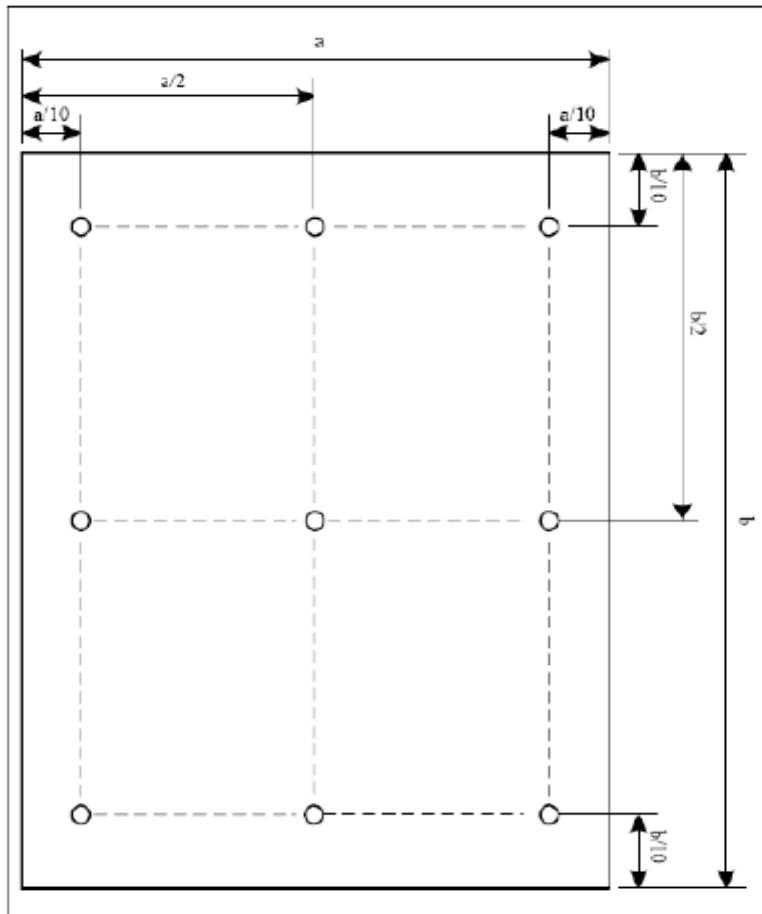

Note (2) The “LED life time” is defined as the module brightness decrease to 50% original brightness at T<sub>a</sub>=25°C and IL=120mA. The LED lifetime could be decreased if operating IL is larger than 120mA. The constant current driving method is suggested.

|          |                  |     |      |               |
|----------|------------------|-----|------|---------------|
| Part. No | KD028QVFMA017-RT | REV | V1.1 | Page 13 of 34 |
|----------|------------------|-----|------|---------------|

NOTE 3: Luminance Uniformity of these 9 points is defined as below:

$$\text{Uniformity} = \frac{\text{minimum luminance in 9 points (1-9)}}{\text{maximum luminance in 9 points (1-9)}}$$

$$\text{Luminance} = \frac{\text{Total Luminance of 9 points}}{9}$$

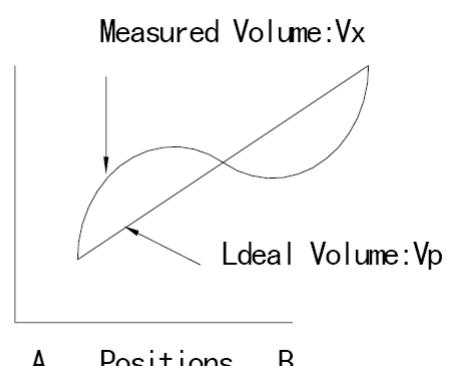

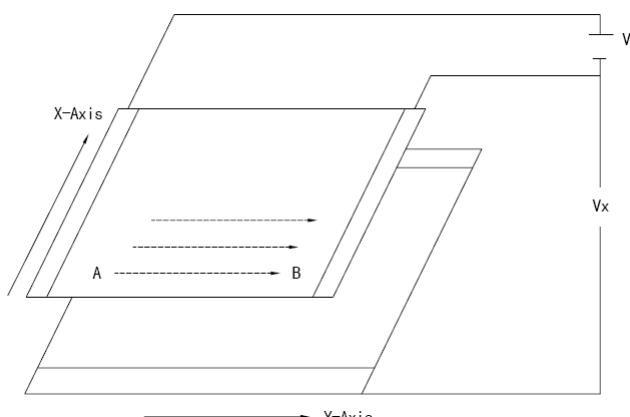

## 6. TP Feature

### 6.1 Conditions of use and storage

| Item                             | Value(condition)                                   | Note                  |
|----------------------------------|--|-----------------------|
| Temperature range upon operation | Humidity: 20%~90% non dew, condensation -20°C~70°C | In a simple substance |
| Temperature range upon storage   | Humidity: 20%~90% non dew, condensation -30°C~80°C | In a simple substance |

### 6.2 Electrical property

| Item                         | Value                             | Note   |
|------------------------------|-----------------------------------|--|
| Maximum voltage              | DC5V                              |  |
| Resistance between terminals | X direction[Film side]:200-600Ω   |  |
|                              | Y direction [Glass side]:300-900Ω |  |
| Insulation resistance        | DC 25V 20MΩ or above              | Connect X + ~X- and Y+ ~Y-, apply 25VDC Between X and Y for perform measurements |
| Chattering                   | 10 msec or below                  |  |
| Rating                       | Voltage is DC 5V                  |  |

|          |                  |     |      |               |
|----------|------------------|-----|------|---------------|
| Part. No | KD028QVFMA017-RT | REV | V1.1 | Page 15 of 34 |
|----------|------------------|-----|------|---------------|

### 6.3 Mechanical property

| Item                | Performance                        |                  | Note  |
|---------------------|------------------------------------|------------------|---|
| Input method        | Used of an exclusive pen or finger |                  |   |
| Load upon operation | Exclusive pen                      | 60-100g or below | Operation and measurement with a pen must be carried out under the following tip conditions: Stylus pen material : POM(ployacetal). Tip : Diameter 3.0mm, SR 0.8 mm                             |
|                     | Finger                             | 60-100g or below | Operations and measurement methods simulated for a finger must be carried out under the following tip conditions. Material :Silicon rubber (Hardness : 30°Hs) Tip : Diameter 12.0 mm, SR 12.5mm |
| Surface hardness    | Pencil hardness : 3H or above      |                  | It complies with the way of test method JIS K5400.  |

### 6.4 Optical property

| Item                      | Performance                            | Note      |
|---------------------------|--|-----------|
| Total light transmittance | 80% or above                           | JIS K7105 |
| Haze                      | 5% or below                            | JIS K7136 |
| Film specification        | Polished type with hard coated surface |           |

|          |                  |     |      |               |

|----------|------------------|-----|------|---------------|

## 7.5 Reset Timing Characteristics

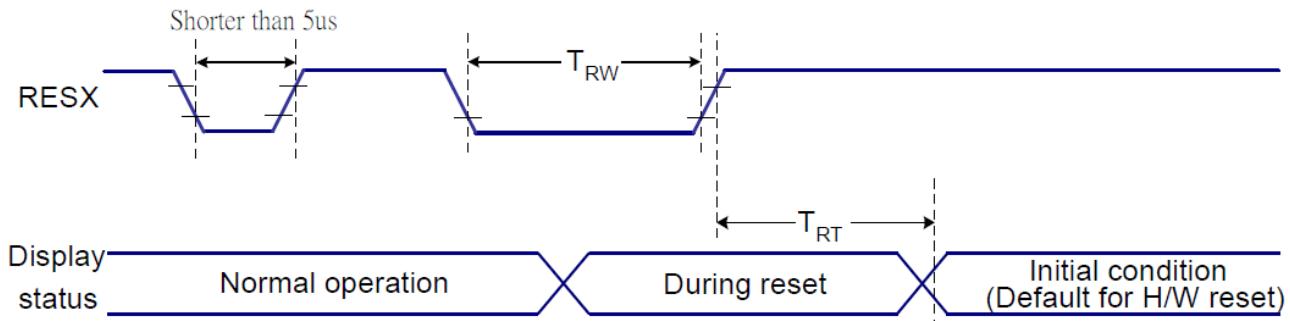

Figure 6-5-1 Reset Timing

$VDDI=1.65$  to  $3.3V$ ,  $VDD=2.4$  to  $3.3V$ ,  $AGND=DGND=0V$ ,  $T_a= -30$  to  $70$  °C

| Signal | Symbol   | Parameter            | Min | Max                | Unit |
|--------|----------|----------------------|-----|--------------------|------|
| RESX   | $T_{RW}$ | Reset pulse duration | 10  |                    | us   |
|        | $T_{RT}$ | Reset cancel         |     | 5 (Note 1, 5)      | ms   |
|        |          |                      |     | 120 (Note 1, 6, 7) | ms   |

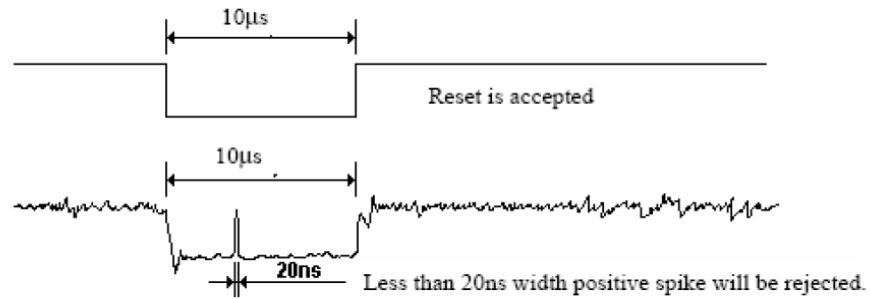

Notes:

1. The reset cancel includes also required time for loading ID bytes, VCOM setting and other settings from NVM (or similar device) to registers. This loading is done every time when there is HW reset cancel time ( $t_{RT}$ ) within 5 ms after a rising edge of RESX.
2. Spike due to an electrostatic discharge on RESX line does not cause irregular system reset according to the table below:

| RESX                | Action         |
|---------------------|----------------|
| Shorter than 5us    | Reset Rejected |
| Longer than 9us     | Reset          |
| Between 5us and 9us | Reset starts   |

3. During the Resetting period, the display will be blanked (The display is entering blanking sequence, which maximum time is 120 ms, when Reset Starts in Sleep Out –mode. The display remains the blank state in Sleep In –mode.) and then return to Default condition for Hardware Reset.

4. Spike Rejection also applies during a valid reset pulse as shown below:

5. When Reset applied during Sleep In Mode.

6. When Reset applied during Sleep Out Mode.

7. It is necessary to wait 5msec after releasing RESX before sending commands. Also Sleep Out command cannot be sent for 120msec.

## 8 LCD Module Out-Going Quality Level

### 8.1 VISUAL & FUNCTION INSPECTION STANDARD

#### 8.1.1 Inspection conditions

Inspection performed under the following conditions is recommended.

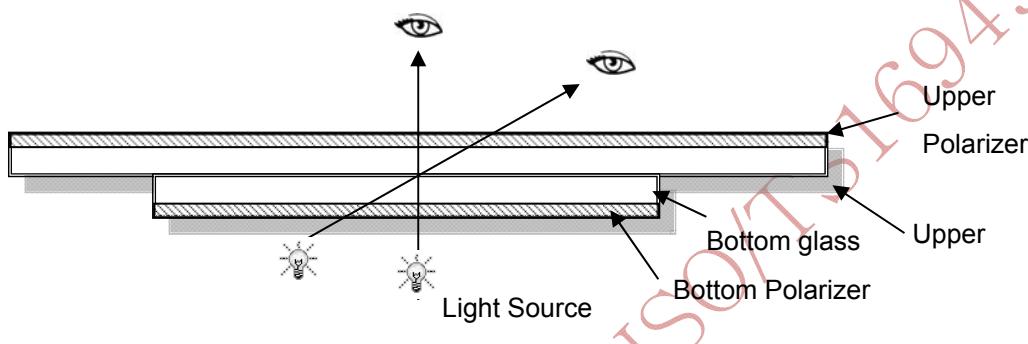

Temperature :  $25\pm 5^{\circ}\text{C}$

Humidity :  $65\%\pm 10\%\text{RH}$

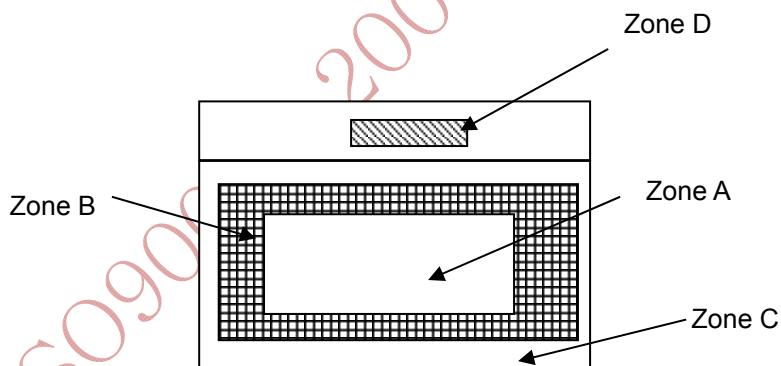

Viewing Angle : Normal viewing Angle.

Illumination: Single fluorescent lamp (300 to 700Lux)

Viewing distance:30-50cm

#### 8.1.2 Definition

Zone A : Effective Viewing Area(Character or Digit can be seen)

Zone B : Viewing Area except Zone A

Zone C : Outside (Zone A+Zone B) which can not be seen after assembly by customer .)

Zone D : IC Bonding Area

Note:

As a general rule ,visual defects in Zone C can be ignored when it doesn't effect product function or appearance after assembly by customer

## 9. Reliability Test Result

### 9.1 Condition

| Item                                 | Condition   | Sample Size | Test Result | Note |
|--------------------------------------|---|-------------|-------------|------|
| Low Temperature Operating Life test  | -20°C, 96HR   | 3ea         | pass        | -    |
| Thermal Humidity Operating Life test | 70°C 90%RH, 96HR  | 3ea         | pass        | -    |
| Temperature Cycle ON/OFF test        | -20°C ↔ 70°C, ON/OFF, 20CYC   | 3ea         | pass        | (1)  |
| High Temperature Storage test        | 80°C, 96HR  | 3ea         | pass        | -    |
| Low Temperature Storage test         | -30°C, 96HR   | 3ea         | pass        | -    |
| ESD test                             | 150pF, 330Ω, ±6KV(Contact)/± 8KV(Air), 5 points/panel,<br>10 times/point  | 3ea         | pass        |      |
| Thermal Shock Resistance             | The sample should be allowed to stand the following 5 cycles of operation: TSTL for 30 minutes -> normal temperature for 5 minutes -> TSTH for 30 minutes -> normal temperature for 5 minutes, as one cycle, then taking it out and drying it at normal temperature, and allowing it stand for 24 hours | 3ea         | pass        |      |
| Box Drop Test                        | 1 Corner 3 Edges 6 faces, 66cm(MEDIUM BOX)  | 1box        | pass        | -    |

Note (1) ON Time over 10 seconds, OFF Time under 10 seconds

## 10. Cautions and Handling Precautions

### 10.1 Handling and Operating the Module

- (1) When the module is assembled, it should be attached to the system firmly.  
Do not warp or twist the module during assembly work.
- (2) Protect the module from physical shock or any force. In addition to damage, this may cause improper operation or damage to the module and back-light unit.
- (3) Note that polarizer is very fragile and could be easily damaged. Do not press or scratch the surface.
- (4) Do not allow drops of water or chemicals to remain on the display surface.  
If you have the droplets for a long time, staining and discoloration may occur.
- (5) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (6) The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane.  
Do not use ketene type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs, or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static; it may cause damage to the CMOS ICs.
- (9) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (10) Do not disassemble the module.
- (11) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (12) Pins of I/F connector shall not be touched directly with bare hands.
- (13) Do not connect, disconnect the module in the "Power ON" condition.
- (14) Power supply should always be turned on/off by the item 6.1 Power On Sequence & 6.2 Power Off Sequence

### 10.2 Storage and Transportation.

- (1) Do not leave the panel in high temperature, and high humidity for a long time.  
It is highly recommended to store the module with temperature from 0 to 35 °C and relative humidity of less than 70%.
- (2) Do not store the TFT-LCD module in direct sunlight.
- (3) The module shall be stored in a dark place. When storing the modules for a long time, be sure to adopt effective measures for protecting the modules from strong ultraviolet radiation, sunlight, or fluorescent light.
- (4) It is recommended that the modules should be stored under a condition where no condensation is allowed. Formation of dewdrops may cause an abnormal operation or a failure of the module.  
In particular, the greatest possible care should be taken to prevent any module from being operated where condensation has occurred inside.
- (5) This panel has its circuitry FPC on the bottom side and should be handled carefully in order not to be stressed.
